Task-1

Technical Specification

- React with vite
- HTML
- CSS
- Material UI

Evaluation Metric:

- **Scheduling Efficiency:** Evaluate how quickly users can schedule events.
- **Cross-Device Sync Success:** Check the reliability of calendar syncing across different devices.
- **User Time Saved:** Quantify the time efficiency gained by users.
- **To-Do List Integration:** Assess how well users integrate to-do lists with their calendars.
- **App Loading Time:** Measure the speed and responsiveness of the app.
- **Customer Support Effectiveness:** Evaluate the responsiveness and helpfulness of customer support.

Step-Wise Description

- **Ideation and Goals:** Define unique app goals and features to address user needs.
- **Market Research:** Analyze the market and competitors to inform strategic development.
- **Platform Selection:** Choose a development platform aligned with the target audience and technical needs.
- **Feature Prioritization:** Identify and prioritize key features to optimize scheduling efficiency.
- **Development and Security:** Systematically develop the app while integrating robust security measures.
- **Launch and Iteration:** Strategically launch the app, gather user feedback, and iteratively enhance based on insights.

Summary of your task

The calendar scheduler app streamlines scheduling with a user-friendly interface, cross-device syncing, and collaboration features. Key aspects include customization, to-do list integration, and automated event suggestions. Security measures prioritize user data protection. Through a strategic launch and continuous user feedback, the app aims for an optimal and secure scheduling experience.
